**INDEX NUMBERS OF AREA UNDER CROPS, AGRICULTURAL
PRODUCTION AND YIELD 1970 - 71 TO 1997 - 98
MEGHALAYA.**

[BASE :- TRIENNIUM ENDING 1972-73]

**DIRECTORATE OF ECONOMICS & STATISTICS,
GOVERNMENT OF MEGHALAYA, SHILLONG.**

PREFACE

Meghalaya Index Number on area, production, yield etc. relating to the agricultural economy of the State is presented in this booklet for the years 1970-71 to 1997-98.

The construction of the Index on Agriculture was prepared by the Agricultural Statistics Division of this Directorate.

Sd/-

W.L. Lyngdoh

Director of Economics & Statistics.

Meghalaya, Shillong.

CONTENTS

	Page
1. Construction of Meghalaya Index Numbers of Agricultural Production - A BRIEF NOTE	4 - 7
2. Index Numbers on Area, Production and Yield of Foodgrains, Non-Foodgrains and All Crops of the State	8
3. Index Number on Area under Crop, Yield data and Agricultural Production	9
4. Index Numbers on area under Principal (Forecast) crops	10 - 13
5. Index Numbers on Agricultural Production of Principal (Forecast) Crops	14 - 17
6. Index Numbers on Yield of Principal (Forecast) Crops	18 - 22

Personnel of Agricultural Statistics Division.

Directorate of Economics & Statistics,

Meghalaya : Shillong.

1. Shri K. Kamaraju. Deputy Director.
2. Miss K. F. Lyngdoh. Inspector of Statistics.
3. Shri K. M. Syiem. Sub-Inspector of Statistics.

GRAPHS.

1. Shri Ivan Dkhar. Computor.
2. Shri Davis N.R. Marak. Computor.

AGRICULTURAL INDEX NUMBERS

INTRODUCTION.

Meghalaya has emerged as a full-fledged State in 1972 on bifurcation of the State of Meghalaya from the erst while Assam State. In the economy of the State, agriculture plays a dominant role as the majority of the rural population depends directly or indirectly on agriculture for livelihood. About one third of the State's domestic product originates from this sector. In order to enable to assess the overall performance of this sector over the years, an attempt has been made to compile the index numbers of agricultural production in the State.

Base Period

The Technical Committee on Index Numbers relating to agricultural economy under the Chairmanship of Dr. V.G. Panse had suggested to make the triennium ending 1969-70 as the weight base. This was however, not possible in the case of Meghalaya as the State came into being only in 1970. Keeping in view the recommendations of the Technical Advisory Committee and considering the present position of agricultural statistics such as availability of data etc., in Meghalaya, the triennium ending 1972-73 has been adopted as base. So far as Meghalaya is concerned, the base chosen satisfies the condition of the normal period as desired by the T.A.C.

NOTE

Of the 7 indices recommended by the Technical Advisory Committee for construction of indices, the present series has been compiled only for 4 such indices, namely (i) Index of Area under crops (ii) Index of cropping pattern (iii) Index of Yield (iv) Index of Agricultural Production.

COVERAGE.

The present series covered 22 crops divided into two main groups viz. (i) Food grains (ii) Non-Food grains, which have been further subdivided into sub-groups as shown below :-

- (i) Food grains
 - (a) Cereals - Rice, Maize, Wheat, other cereals and small millets
 - (b) Pulses - Gram, Tur, and other pulses.

- (ii) Non Food grains-
 - (a) Oilseeds - Sesamum, Rape and Mustard.
 - (b) Fibres - Jute and Mesta, Cotton.
 - (c) Condiments and Spices - Dry Chillies, Turmeric and Arecanut.
 - (d) Fruits and vegetables - Potatoes, Sweet Potato, Banana, Tapioca and Papaya.
 - (e) Misc. Crops - Sugarcane and Tobacco.

The above crops account for nearly 90 - 95 percent of the total gross cropped area in the State during the triennium.

WEIGHTS

Area under Crops :- No explicit weights have been given to different crops for computation of index numbers of area of sub-group, group and all crops indices. These have been calculated directly from the area under sub-group, group and all crops in different years. There is thus implied weighting proportional to the area under individual crops to the total area under all crops.

Cropping Pattern:- Weights are assigned to individual crops in proportion to the value of yield per hectare during the base period.

Yield:- Current year's area under individual crops was used as weights to the value of yield per hectare using base period prices.

Agricultural Production:- Average prices in the base period have been used as weight-co-efficients.

TYPES OF DATA USED.

- (i) The price used for the weighting diagram of various indices were the harvest prices/primary wholesale prices or nearest equivalent and the same as used for estimation of State Income.
- (ii) Area figures are based on the season and Crop forecast reports as released by the SSB from time to time.
- (iii) **Yield and Production:-** Yield rate per hectare in respect of Rice, Maize, Wheat, Rape and Mustard, Potato and Jute were obtained on the basis of crop-cutting experiments. For others the yield rates were obtained by dividing the production figures by the area figures. These Production figures are based on the traditional eye-estimation method.

METHODOLOGY.

The formula used for the existing series as under:

$$1. \text{ Index of Area under Crops } \text{-----} = \frac{\sum a_{ij}}{\sum a_{io}} \times 100 \text{ (1)}$$

$$2. \text{ Index of Cropping patterns } \text{-----} = \frac{\sum c_{ij} \text{ yio } \text{ pio}}{\sum c_{io} \text{ yio } \text{ pio}} \times 100$$

$$\sum \frac{a_{ij}}{\sum a_{ij}} \text{ yio } \text{ pio} = \text{-----} \times 100$$

$$\sum \frac{a_{io}}{\sum a_{io}} \text{ yio } \text{ pio} = \frac{\sum a_{ij} \text{ yio } \text{ pio}}{\sum a_{io} \text{ yio } \text{ pio}} \times \frac{a_{io}}{a_{ij}} \times 100 \text{(2)}$$

$$3. \text{ Index of Yield } \text{-----} = \frac{\sum a_{ij} \text{ y}_{ij} \text{ pio}}{\sum a_{ij} \text{ yio } \text{ pio}} \times 100 \text{(3)}$$

$$4. \text{ Index of Agricultural Production } = \frac{\sum a_{ij} \text{ y}_{ij} \text{ pio}}{\sum a_{io} \text{ yio } \text{ pio}} \times 100$$

$$= \frac{\sum P_{ij} \text{ pio}}{\sum P_{io} \text{ pio}} \times 100$$

$$= \frac{\sum \frac{P_{ij}}{P_{io}} \times P_{io} \text{ pio}}{\sum P_{io} \text{ pio}} \times 100 \text{ (4)}$$

Where

a_{io} = Area under the i th crop in the base period.

a_{ij} = Area under the i th crop in the j th period.

$$c_{io} = \frac{a_{io}}{\sum a_{io}}$$

$$c_{ij} = \frac{a_{ij}}{\sum a_{ij}}$$

y_{io} = Yield per hectare of the i th crop in the base period.

y_{ij} = Yield per hectare of the i th crop in the j th year.

p_{io} = Price per unit of the i th crop in the base period.

P_{io} = Production of the i th crop in the base period.

P_{ij} = Production of the i th crop in the j th year.

For sub - group and groups of crops the indices are as below:

a. Index number of area = $\frac{\sum a_{ij}}{\sum a_{io}} \times 100$

b. Index numbers of production = $\frac{\sum a_{ij} Y_{ij} W_i}{\sum a_{io} Y_{io} W_i} \times 100$

$$C_i = \frac{a_{io} Y_{io} W_i}{\sum a_{io} Y_{io} W_i} \times 100 \text{ is termed}$$

as "weight Coefficient" and is listed alongwith the crops.

c. Index number of Yield = $\frac{\sum c_i I_{Pij}}{\sum c_i I_{Aij}} \times 100$

INDEX NUMBERS ON FOODGRAINS, NON FOODGRAINS AND ALL CROPS 1970-71 TO 1997-98.

(Base: Triennium Ending 1972-73)

Years	Index of Area under Crops			Index of Agricultural Production			Index of Yield.
